

**The 1st Digital Video Recorder for PC which can record onto a CD
all TV satellite programmes -even Pay TV !-
and play them on your home DVD.**

La Ciotat – France – January 14, 2002

AT-SKY made waves with the launch, in November 2001, of **INFOCAST™**, the first 100% free Bouquet of TV, Radio and broadband Internet.

But the revolution is not over yet! AT-SKY announces another break-through innovation with the integration of @Sky Crypt in its **INFOCAST™** receiver for PC which enables so far unknown recording capabilities in the Digital TV world.

@Sky Crypt is a Conditional Access based on the EuroCrypt Standard developed by France Telecom. This Conditional Access, which will be freely downloaded 'over-the-air' on the **INFOCAST™** receivers, protects also Multimedia Services.

Moreover, the EuroCrypt Standard is also used by the Conditional Access used for instance in France by TPS or AB-Sat, but also by several other Operators in the World.

Last but not least, AT-SKY has also included rather innovative functions for recording and exporting the content onto a CD.R. Once connected to an ordinary PC with a CD Recorder, the **INFOCAST™** receiver enables anybody to record all programmes and films on his PC's hard-disk, and then convert them under different formats such as DivX;-), Video CD, MPEG-2, MPEG-4, MPEG-1 ... among them some are compatible with a Home DVD player!

The **INFOCAST™** digital recorder becomes thus the ideal companion to Pay TV subscribers who already own a receiver. If one wants to record an encrypted film, all he has to do is to insert his subscription smartcard into the **INFOCAST™** Receiver, record the film in digital format and transfer it onto a CD.R to watch it on the home DVD!

The same goes, of course, for music with the possibility of recording your choice of programmes from among 150 radio stations freely available on the AT-SKY bouquet.

In addition, AT-SKY intends to offer on the **INFOCAST™** Receiver additional Conditional Access used by the other Pay TV Bouquets.

*"The **INFOCAST™** receiver will change the mass consumption pattern of Video" says Jean-Yves Le Roux, President of AT-SKY, "in the same way MP3 has revolutionized the Music market. A private digital copy of a film on a 1 € CD, compatible with a DVD reader, is now a reality for all Consumers".*

Date of release : February 2002

About AT-SKY :

Set up in January 2000, AT-SKY is a French company dedicated to the conception, commercialisation and operation of broadcasting infrastructures, processing and reception of multimedia data for PC through satellite or terrestrial delivery. Among the shareholders of AT-SKY are : France Telecom (through TDF), Teamlog (French SMSI) and the Caisse d'Epargne (FCPI Innoveris).

Its products are overlapping several growing markets :

- the market of digital satellite and terrestrial reception.
- the market of broadband distribution.
- the market of digital recording for PC and DVD.

In November 2001, AT-SKY - in partnership with SES-ASTRA, World's leading satellite operator – launched the **INFOCAST™** service, the first free multimedia bouquet available all over Europe and North Africa.
