## **NEOTION launches an MPEG-4 decoder in a credit card format!!**

The Neotion Pocket DTV: the smallest digital TV receiver in the World.

Who could have imagined that? An MPEG-4 decoder, as small as a credit card, that anyone can carry out with him, and which simply connects onto the digital industry standard interface of all new generation TV sets!

Thanks to the Neotion Pocket DTV, everybody could at last enjoy the breakthrough image quality that MPEG-4 enables, and also beyond, benefit from the most advanced digital technologies such as Home Networking.

To successfully complete that challenge, genuine innovation was simply not enough. After 3 years of intense research and efforts, NEOTION proudly announces the immediate launch of a 100% French based Technology that combines around an optimized single chip - the NEOTION Processor 4 - all of the key functions of a state of the art new generation digital decoder. On top of the integration of the new international Standard for TV (i.e.: MPEG-4 H264), NEOTION has also developed advanced security modes that have never been implemented to date into any consumer electronic products, thus, ideally addressing the legitimate requests of Pay TV editors and Video on Demand operators.

Strengthened by a worldwide patent, NEOTION plans to develop a compelling range of MPEG-4 based decoders in a credit card format. Those shall range from an original digital TV receiver to highly advanced versions combining for instance digital recording functions and hybrid access to the IP space through WiFi or even HomePlug (Power Line Connexion).

Already qualified by 2 top tier partners, the shipments of NP DTV products should soon reach hundreds of thousands of units. The Neotion Pocket DTV is sampled since January, and mass production of such ultra portable TV decoders should occur from April onwards.

*« The Neotion Pocket DTV shall undoubtedly transcend the business models of Digital TV for the masses, no matter if it is free-to-air or subscription based. The unique combination of the MPEG-4 into such a small form factor, makes it also perfectly tailored for the up-coming explosion of flat panels TV and for the analogue switchoff all over the World »* said Jean-Yves Le Roux, Chairman of NEOTION.

NEOTION shall soon hold a press conference to unveil the company worldwide Strategy.
